PROFESSIONAL SUMMARY

Senior Full-Stack Software Engineer with 10+ years of experience building scalable, API-driven manufacturing and enterprise applications. Strong expertise in CMMS-based maintenance systems, Statistical Process Control (SPC), real-time dashboards, and ETL pipelines using Angular 2+, Go, .NET, Kafka, and MySQL. Proven track record delivering microservices-based, cloud-native solutions that improve asset reliability, production planning, efficiency.

TECHNICAL SKILLS

Languages	TypeScript, Go, C#, HTML5, CSS3, Java, Python, JavaScript
Database	SQL Server, MySQL, PostgreSQL, Clickhouse
Frameworks	Angular 2+, .NET Core, Android SDK, Websockets, Kubernetes, Git
Software processes & tools	Splunk, JIRA, Confluence, Jenkins, Postman, Scrum

EXPERIENCE

Sr. Software Engineer Tesla, Inc.	Jan 2019 - Present <i>Austin, TX</i>
---	---

- **Statistical Process Control (SPC) Application:** Designed and implemented key features to enhance manufacturing data analysis, including specification limit definitions, rule-based alerts, and robust ETL pipelines for seamless data ingestion and transformation from multiple applications using Go, Angular 2+, Kafka, Python and MySQL. Developed interactive charts for real-time data visualization, enabling quick identification of deviations and informed decision-making.
- **Computerized Maintenance Management System (CMMS):** Built a microservice-based single-page application to track equipment status and manage maintenance requests, utilizing Angular 2+, Go, C#, .NET Core, MySQL and SQL Server. Designed a reactive dashboard using websockets to monitor live machine, line, and station statuses, improving response time and operational efficiency.
- **Field Engineering:** Created a reactive dashboard using Angular 2+, Go, Clickhouse and MySQL to predict the availability of battery packs and drive units at the Fremont factory, enabling accurate production planning for the next 24 hours to a week. Automated deployment processes using Jenkins and Kubernetes, improving deployment reliability and speed.
- **Manufacturing Execution System (MES):** Developed an Android application for material management and built Angular 2+ dashboards using Go and MySQL to streamline inventory and manufacturing workflows for Model 3, battery, and solar products..

Associate Cognizant Technology Solutions	Nov 2012 - Jul 2016 <i>Kochi, India</i>
--	--

- **Global Mobility Management:** Developed an end-to-end visa processing application to streamline global mobility management using ASP .NET, C#, SQL Server, JavaScript, HTML5, CSS3, MVC framework. Created WCF web services, RDLC reports, and optimized SQL stored procedures. Mentored new team members and provided post-production support to ensure system reliability.
- **Global Workforce Management:** Designed and implemented a resource allocation and workforce optimization system, leveraging ASP.NET, C#, SQL Server, JavaScript, HTML5, CSS3, Entity Framework enhancing operational efficiency and resource utilization. Created RDLC reports for better data visualization.

EDUCATION

Master of Science in Computer Science , Rochester Institute of Technology Core Areas - Artificial Intelligence and Big Data	Aug 2016 - Dec 2018 GPA: 3.82
---	----------------------------------

Bachelor of Technology in Electronics and Communication , University of Kerala College of Engineering Thiruvananthapuram	Aug 2008 - May 2012
--	---------------------
